

# Test Task for Frontend Challenge

To do this challenge, you need a good understanding of HTML, CSS and JavaScript. \*

# Test Task for Frontend Challenge

## The challenge

Your challenge is to build out this todo app and get it looking as close to the design as possible. You can use any tools you like to help you complete the challenge. So if you've got something you'd like to practice, feel free to give it a go.

### Your users should be able to:

- View the optimal layout for the app depending on their device's screen size
- See hover states for all interactive elements on the page
- Add new todos to the list
- Mark todos as complete
- Delete todos from the list
- Filter by all/active/complete todos
- Clear all completed todos
- **\*\*Bonus\*\***: Drag and drop to reorder items on the list

## Building your project

Feel free to use any workflow that you feel comfortable with. You can choose Angular/React framework or other solutions. It's important to use GIT and Github for this project and do commits throughout the work.

**Your final result must be published to GitHub pages.**
